Center for Resilience & Conservation Aims to Become Paradigm for Resource Centers in State

The COVID-19 pandemic has had global impacts, affecting everyone on the planet. But low-income and traditionally isolated and disinvested areas have experienced disproportionate effects. And in Nebraska, the pandemic came on the heels of a multitude of problems affecting everyone on the planet. But low-income neighborhoods hard-hit by the many factors: internal and external stresses. Jobs and entrepreneurial opportunities, health facilities, improved housing, access to great local and affordable fresh foods, financial and technical guidance, connection to social services and advocacy, and social and educational spaces are among the many aspects planned for the centers. Each resource center will be different to address the many needs of the residents in its location.

The first of those planned centers is to be the LNK Center for Resilience and Conservation in Lincoln. Three anchors in the LNK Center will be the Lincoln Public Market, EcoStore, and My LNK Hub.

The Joslyn Institute’s initiatives all consider working toward a circular economy. What does that mean? A circular economy is a production and consumption model which involves the design of materials and products and practices that take into account circularity, will generate $7.3 billion Euros and 540,000 new jobs through their EC programs over the next few years. More information on the Wild & Scenic Film Festival can be found at the GOC website.

If you shop for holiday snacks and start up for the wintor with four late season markets. More detailed information on local food! The Netherlands, a world leader in economic circularity, will generate $7.3 billion Euros and $40,000 new jobs through their EC programs over the next few years. Learn more about the circular economy at the Ellen MacArthur Foundation website.
